The census bureau reports that canned fruits to the value of $24,897,174, dried fruits, $34,771,912 were produced in 1914 in the United States, an increase of 96 per cent in the case of the former and 56 per cent in the case of the latter in a period of five years.

Retiring Secretary F. H. Ballou, Ohio Horticultural society says: "Appreciating to the fullest possible extent the courtesy, generosity and good will of the officials of the Ohio Experimental station, the executive committee of the society has exercised excellent judgment in meeting the emergency by appointing as our new secretay Prof. R. B. Cruikshank of the extension department of Ohio State university, Columbus, Ohio. Prof. Cruikshank needs no introduction to the horticulturists of Ohio, for he is already widely known and his sterling character and splendid abilities well recognized and highly appreciated. As a matter of course the wisdom of our executive committee will be heartily endorsed by our membership at the next regular annual meeting of the State society, by electing Prof. Cruikshank for the year 1917."

On May 1, 437 firms reported to the Federal Office of Markets a cold storage holding of 1,005,219 barrels of apples which was 92 per cent greater than the holdings on May 1, 1915.

British import restriction on fruit is to be partially removed October 31.

Just say you saw it in AMERICAN FRUITS.
